

Now that you've completed the section, let's see if you can answer these questions. The answer sheet is available as a PDF in the "Support Files" folder.

Section 6: Validating Input

- 1) If you want to process a binding error on an error handler, which exception do you have to catch?
 - a. **BindingResultException**
 - b. **InvalidParameterException**
 - c. **MethodArgumentNotValidException**
 - d. **BadRequestException**
- 2) Given you have a string field that is annotated with **@Length(min=3, max=255)** and **@URL**, which of these statements is true?
 - a. The string has to be at least 3 characters long
 - b. The string is not allowed to be null
 - c. The value **/test/index.html** is allowed
 - d. The value **http://mydomain.local** is allowed
 - e. The type of the field could also be URI using the same annotations
- 3) What do you have to do to add validation to your REST API?
 - a. Add spring validation starter to the project dependencies.
 - b. Add **@EnableValidation** to your Application class
 - c. Add **@Valid** to the **Model** class
 - d. Add **@Valid** above the method definition
 - e. Add **@Validation** in front of the method parameter
 - f. Add Validators to the model
- 4) Which among the following approaches works when you want to conditionally add the CSS class **test2** to this **<div class="test1"></div>** node?
 - a. **<div th:class="test2" class="test1"></div>**
 - b. **<div th:class="test1 \${VALUE?'test2'}" class="test1"></div>**
 - c. **<div th:classappend="\${VALUE?'test2'}" class="test1"></div>**
 - d. **<div th:classappend="\${VALUE?'test2'}" class="test1"></div>**
- 5) You want to validate a form. Which of these definitions are correct if you want to show the errors in the form?
 - a. **public String myHandler(@Valid MyEntity entity, Model model, BindingResult bindingResult){...}**
 - b. **@Valid public String myHandler(MyEntity entity, Model model, BindingResult bindingResult){...}**
 - c. **public String myHandler(@Valid MyEntity entity, BindingResult bindingResult){...}**
 - d. **public String myHandler(@Valid MyEntity entity, BindingResult bindingResult, Model model){...}**
 - e. **public String myHandler(@Valid MyEntity entity, Model model){...}**
